#### Problem statement

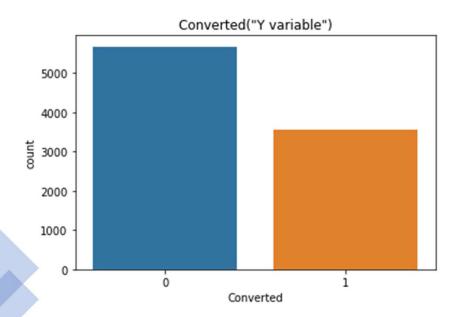

An X Education company needs help to select the most promising leads, i.e. the leads that are most likely to convert into paying customers. The company requires us to build a model wherein you need to assign a lead score to each of the leads such that the customers with higher lead score have a higher conversion chance and the customers with lower lead score have a lower conversion chance. The CEO, in particular, has given a ballpark of the target lead conversion rate to be around 80%.

### Case study approach

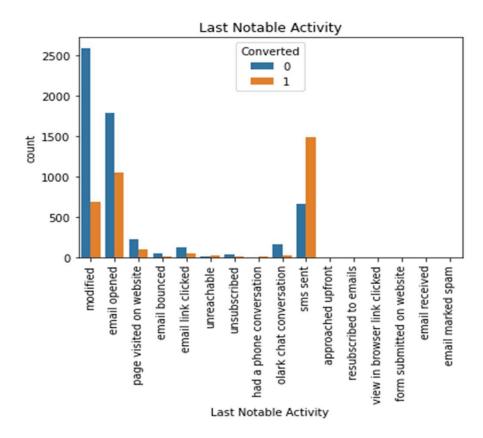

- Data Loading & Cleaning
- Exploratory Data Analysis
- Creating Dummy Variables
- Train Test Splitting of Data
- Building a Logistic Regression Model
- Evaluating the Model by different Measures and Metrices Accuracy, Sensitivity, Specificity, Precision and Recall
- Checking the Model Performance over Test Data by Confusion Metrix, Sensitivity, and Specificity

## **Exploratory Data Analysis**

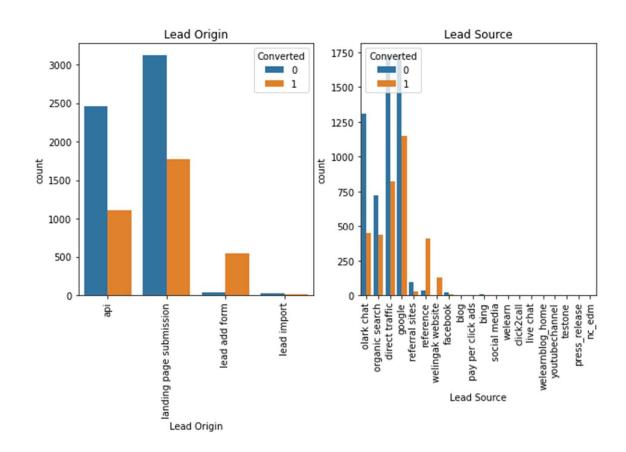

There is more than 35% Conversion rate in Total

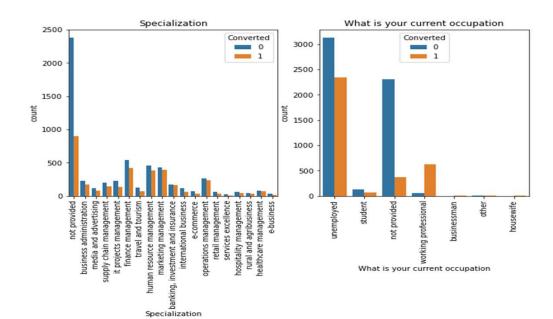

• More users converted when the last notable activity was 'sms sent'.

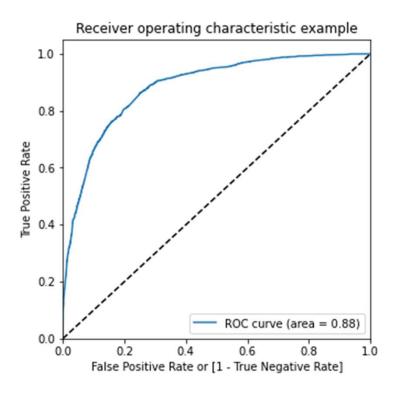

- More conversion happened when Lead source was Google, Direct Traffic, Organic Search or Welingak website.
- Also, conversion rate was high when the lead origin is 'lead add format'.

• More potential users are working professional. They have more conversion rate.

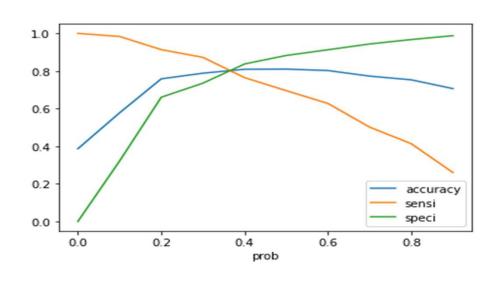

## Model Evaluation – ROC Curve

The area under ROC curve is 0.87 which is a very good value

# Model Evaluation on Train Data – Sensitivity and Specificity

#### **Confusion Metrix**

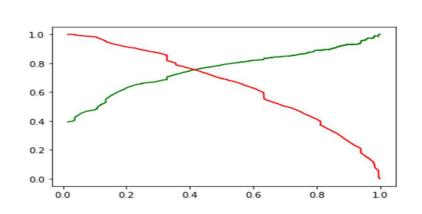

3438	457
748	1708

Accuracy - 81%

Sensitivity – 70%

Specificity – 88%

## Model Evaluation on Train Data — Precision and Recall

#### **Confusion Metrix**

3289	606
593	1863

Precision – 75% Recall – 76%

## Model Evaluation on Test Data

#### **Confusion Metrix**

1406	338
181	798

Accuracy - 81% Sensitivity - 82% Specificity - 81%

#### **Confusion Metrix**

1472	272
232	747

Precision – 73% Recall – 75%

#### Conclusion

It was found that the variables that mattered the most in the potential buyers are (In descending order):

- The total time spend on the Website.
- Total number of visits.
- When the lead source was:
  - a. Google
  - b. Direct traffic
  - c. Organic search
  - d. Welingak website
- When the last activity was:
  - a. SMS
  - b. Olark chat conversation
- When the lead origin is Lead add format.
- When their current occupation is as a working professional.
